Data Scientist

Skilled problem-solving physics student with a focus on data science. Proficient in **Python** and skills in **SQL**, **Power BI**, and **R**. Experienced in interpreting data, my ability to combine physics principles with data-driven tools enables me to effectively solve problems and communicate insights, as well as having a constant desire to learn new tools.

Experience

Data Scientist May 2023 – Jul 2023
UpWork *Remote Freelance*

- Extracted and organized 11,000+ public domain datasets through **APIs** from **Kaggle, OpenML**, and **HuggingFace**.
- Optimized Python code by nearly **75%** for more efficient data retrieval from **APIs**.

Data Scientist Jan 2024 – Apr 2024
Freelancer.com *Remote Freelance*

- Reimplemented ML models (KNN, Linear Regression, Naive Bayes and more) in Python from scratch.
- Utilized OpenCV for **image processing**, implementing spatial and point operations.

Education

University of Antioquia Medellín, Antioquia, Colombia
Bachelor of Science in Physics *May 2022 – Present*

EAFIT University Medellín, Antioquia, Colombia
*Data Scientist in Python **diploma*** *Nov 2022 – Apr 2023*

- More than 192 hours of learning and practicing data science skills.
- Covered math, statistics, SQL, Python, actionable predictions, machine learning and hands-on projects.

Projects

Wine Exploration and Clustering *Python, Docker, Scikit-learn, Statistics* Source Code

- Analyzed and developed a clustering algorithm for wine data.
- Utilized **Docker** to containerize the project pipeline, including data retrieval from an API, data manipulation using Pandas, **statistical analysis**, and creation of the clustering algorithm.

Mobile Use Prediction *SQL Server, Python, PowerBi, Pandas* Source Code

- Automated data organization, transformation, and upload to SQL Server database using more than 300 lines of clean Python code.
- Developed detailed PowerBi and Pandas EDA reports to extract key insights from the data.

DiveAI, SelSegToYolo: Tech Olympics 2023 *SAM, Yolov8, LabelMe, Python* Source Code

- We created SelSegToYolo, a tool to improve AI model training in the Tech Olympics 2023 competition, using **Segment Anything, Yolov8**, and **LabelMe**.
- Analyzed over 33,000 animal images, extracted key features from the files, and performed transformations to achieve database normalization.

Domestic Violence Analysis *Python, Pandas, Plotly, Git* Source Code

- Employed **Plotly** and **Matplotlib** in Python for interactive data visualization, enabling geographical and historical analysis.

Certifications

- EFSET English Certificate 78/100 (C2 Proficient)
- Data analysis and machine learning in Python
- Git and GitHub Professional Course
